DETAILED ACTION

Election/Restrictions

1. Claims 33-40, 43-48, 63-71 and 78-83 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on September 26, 2005.

Applicant's election with traverse of Species A, Sub-species AA in the reply filed on September 26, 2005 is acknowledged. The traversal is on the ground(s) that the various mechanisms for flow control do not require separate search. This is not found persuasive because flow control mechanisms are an extensive collection of art with distinct features and classifications and search/consideration of all species would be a burden on the examiner.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-32, 41, 42, 49-62 and 72-77 are rejected under 35 U.S.C. 102(b) as being anticipated by Schnitzius (DE 3939118).

Application/Control Number: 10/820,280 Page 3

Art Unit: 3683

Schnitzius discloses a spring system comprising a housing having an axis, an internal chamber, and axially opposite bottom and top ends, a rod member (12) coaxial with the axis and positioned within the internal chamber and having an inner end in the housing and an outer end axially outwardly of said top end, a guide member (13) on said inner end of said rod member supporting said rod member for reciprocation axially of said housing between retracted and extended positions relative thereto, first and second compression springs (17, 18) each extending between said guide member and the bottom end of said housing, said first and second springs being coaxial with one another and with said axis, said guide member dividing said internal chamber into at least two sub-chambers (14, 15), said guide member including a first passageway that at least partially regulates fluid flow between said at least two sub chambers during said reciprocation of said rod member.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melanie Torres whose telephone number is (571)272-7127. The examiner can normally be reached on Monday-Friday, 6:30 AM - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James McClellan can be reached on (571)272-6786. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
